

SPECIALTY UNDERWRITERS LLC

“We are committed to help preserve the environment and all of its precious resources.”

Specialty Underwriters has recognized that environmental sustainability is one of the overriding issues of our time. We are committed to reduce our green house emissions and have adopted the following practices:

REDUCE ENERGY

- Computers** We require that energy management settings are used and optimized for all laptop and desktop PC's. SU also requires that all computers be turned off when not in use.
- Thermostats** Specialty Underwriters utilizes programmable thermostats that have been proven to reduce energy usage.
- Car Pooling** Specialty Underwriters encourages car pooling whenever possible.

WASTE REDUCTION

Specialty Underwriters is always looking for ways to reduce the use of paper. All sales presentation material is prepared and presented electronically when possible. Instead of using handouts at trade shows, SU uses large banners and electronic media to get our message across.

RECYCLABLE PRODUCTS

Specialty Underwriters uses only recycled paper for all printers, copiers and fax machines. We have also switched to green cleaning products.

REUSE AND RECYCLE

Here at Specialty Underwriters we take recycling very seriously. We have set up multiple recycling stations at every break room and kitchen at our facility.
